

Resistors

DD Insulator

General characteristics

Vehicle resistors are designed and optimized in order to adapt to the available space on the vehicle.

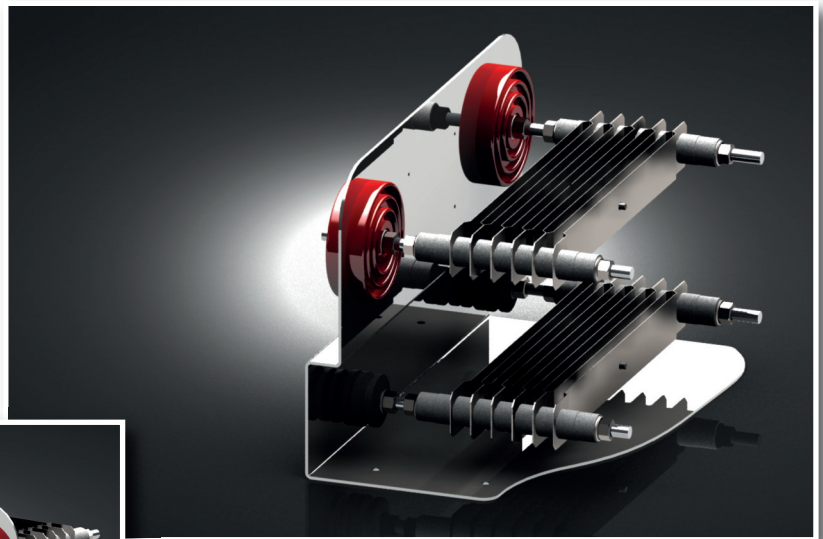

The DD Insulator, a new type of polymeric stand-off, allows to reduce the overall width between side panels, while ensuring the required clearance and creepage distances.

The DD Insulator can be used on small Resistor sizes for the follow application:

- * Crowbar
- * Charging/Discharging
- * Damping
- * Filter

Fire and Smoke compliant:

- TS EN-45545-2
- UNI CEI 11170-3
- NF F 16-101/102
